THE TOP 10 WAYS TO USE INTELLIGENT AUTOMATION IN **HIGHER EDUCATION**

BOOST PRODUCTIVITY & REDUCE STRESS AT YOUR BUSIEST TIME OF YEAR

As an institution for higher learning, you are challenged to provide best-in-class service in support of people's futures. The complexities of today's higher-ed landscape go beyond paperless operation – especially if you're not able to access key information that better enables you to make important decisions related to the futures you're helping to create.

And if gaps in your processes are slowing your team down – you're likely suffering the impact of higher stress, poor motivation and a disjointed approach towards your overall mission.

Using Intelligent Automation, Shamrock Solutions helps to eliminate the negative impact of disjointed processes and applications for Higher-Ed campuses.

With years of implementation experience in Higher Education, we've seen how powerful intelligent automation can revolutionize transcript processing, create a level of student communication management, secure file sharing, electronic form creation, and custom workflow development that seamlessly connects with existing systems, applications, and teams.

Here are the top 10 ways our customers use Intelligent Automation to fuel efficiency across their campuses! Talk to us today about how we can help boost productivity and reduce stress during your busiest time of year, and guarantee the best outcomes for your students, faculty, and staff.

1 // Automate transcript processing.

Extract, normalize, and integrate transcript data from high school, transfer credit, international, or military transcripts into existing SIS/ECM/ERP systems. Every stop of the process that was previously performed by people is now automated!

2 // Easily digitize all of those unstructured documents.

Gone are the days of comically-large rooms full of filing cabinets. Scan those documents in, let intelligent automation index and normalize what's on them, and make that previously dusty content easily searchable by anyone.

3 // Don't sweat the little stuff.

Password resets, change of address, boring spreadsheet calculations, and tedious time wasters are just needless busy work. Tell a bot how to do it, hit a button, and get it done in a fraction of the time - reliably the same, every time.

## 4 // Eliminate keystrokes & improve accuracy.

Manual data entry is a thing of the past, and ripe for human error and frustration. Intelligent Automation can intelligently collect and read text, every time, and ensure accurate data.

5 // Ensure proper compliance.

With the cost of compliance errors reaching new highs, tracking and ensuring immediate access to the detailed data auditors are requesting is more important than ever before.

6 // Guarantee faster turnarounds.

Less manually intensive busy work means more time for staff to focus on providing timely responses and better outcomes for students, faculty, and staff. Intelligent data extraction and robotics process automation (RPA) handles the boring tasks, giving you time back in your day where it matters most.

7 // Augment your existing technology invesments.

Whether it's SIS, ERP, ECM, or other data - it likely means disparate and segmented information all over the campus. Intelligent Automation can push/pull to other systems, normalize and compare differing data, collate information, and integrate all of it in one place!

8 // Remove annoying patchcodes & separator sheets.

Document capture technology is not new, but the industry has advanced with innovative tools and functionality that allow for much more than scanning documents. Now, technology automation enables businesses to classify, learn and extract meaning from their documents - whatever they may be.

9 // Gain real-time insights & reporting.

Password resets, change of address, boring spreadsheet calculations, and tedious time wasters are just needless busy work. Tell a bot how to do it, and get it done in a fraction of the time - reliably the same, every time.

10 // Elevate your students' experience.

Adopting technology and process improvements will guarantee better outcomes for students, faculty, alumni, and campus vendors. Professionals in Higher Education want to serve students with their talents and expertise, not spend hours performing tedious work. Intelligent Automation can transform the way that you work, bring productivity levels to new highs, and elevate the end-to-end student experience for your university.

Shamrock Solutions is all-too-familiar with the negative impact that bad processes can have on your business. Since 2010, Shamrock has leveraged a suite of technologies and partnerships to enable freedom from the mundane through intelligent automation. We're process solvers, and passionate about taking the 'hard' out of work. Visit us today at **www.LuckyYouFoundUs.com**.
